# APIXIO

# Healthcare data interoperability, simplified

Apixio's InfoStream™ solution provides flexible acquisition and integration options for electronic health records, patient charts, and other digital healthcare data.

**APIXIO**

# Lead with a digital approach for healthcare data acquisition

Acquiring patient charts and other healthcare data is a challenge for plans and provider groups. Data acquisition methods have remained mostly unchanged over the past few decades. However, emerging interoperability standards and technology can provide a more flexible, cost-effective way to get the data you need from provider partners.

# InfoStream™: Streamlining healthcare data interoperability

Apixio's InfoStream™ solution provides a comprehensive healthcare data acquisition and integration platform that ingests clinical and administrative data securely from a variety of source systems to power our artificial intelligence (AI) applications and services. Payers and providers can receive chart data faster, in real-time and with greater transparency. As a result, InfoStream™ helps surface insights from clinical data faster for integration into clinical decision-making, improved quality measures, and better patient outcomes.

## Supported EHRs

Epic

Cerner

athenahealth

Allscripts

nextgen healthcare

practice fusion

MEDITECH

eClinicalWorks
"Improving Healthcare Together"

Greenway Health™

# Direct chart retrieval access to major EHR

With InfoStream™, your organization gains direct access to acquire clinical and administrative data from leading EHR platforms such as Epic, Cerner, athenahealth, Allscripts, NextGen, Practice Fusion, eClinicalWorks, and more. Our solution uses the latest interoperability standards including FHIR, (R) APIs, EHR proprietary APIs, HL7, and other APIs to securely pull and encrypt healthcare documents. This data can then be processed to fulfill your chart retrieval needs.

Also, the data can directly be analyzed to power your retrospective chart reviews, prospective risk capture activities, and quality abstraction projects with Apixio. Optimized to enable Apixio solutions, InfoStream will streamline the chart retrieval process, reducing the reliance on traditional on-site chart retrieval services, and provide more efficient methods for EHR extractions.

## Multi-modal chart retrieval approach options

- Automated EHR-based acquisition via direct EHR vendor access
- Automated EHR acquisition via provider-enabled EHR integration
- Manual chart acquisition via provider portal
- Manual chart acquisition via on-site retrieval

## Benefits for health plans

- o Increased frequency of data sharing
- o Improved chart quality
- o Reduced chart retrieval time and cost

## Benefits for provider groups

- o Decreased provider abrasion
- o Reduced on-site retrieval requests
- o Limited implementation time required from IT

**InfoStream™ is a comprehensive data acquisition and integration platform. Learn more at apixio.com.**

## A smarter approach to healthcare

Apixio is advancing healthcare with data-driven intelligence and analytics. Our Artificial Intelligence platform gives organizations across the healthcare spectrum the power to mine clinical information at scale, creating novel insights that will change the way healthcare is measured, care is delivered, and discoveries are made.
