

Complete, accurate coding & auditing powered by AI

Protect your risk adjustment program performance with Apixio's HCC Complete, a chart review solution that lets you look for supported net-new HCCs and confirm the accuracy of existing codes.

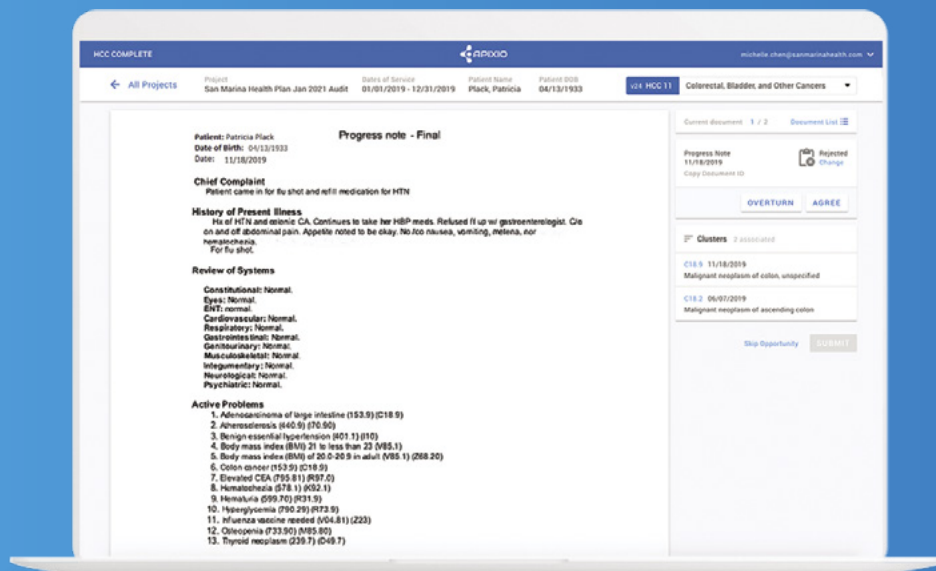

The growing need to look both ways

Compliance has never been more important for retrospective risk adjustment programs. With mounting pressure from the CMS, OIG, DOJ, and other regulatory bodies to curb overpayments and fraudulent reporting, organizations that only review charts to find net-new HCCs are putting their programs at increasing audit risk. But reviewing charts to identify missing supported HCCs and coded HCCs lacking sufficient evidence is time-consuming, costly, and unscalable.

HCC Complete: AI-powered coding & audit

Apixio's HCC Complete solution uses proven AI algorithms to support a comprehensive retrospective chart review experience for MA and ACA programs. Our technology identifies both missed coding opportunities and unsupported known codes and serves them up for review and QA in a straightforward workflow. As a result, risk adjustment teams can review more charts more efficiently, ensuring complete and accurate coding.

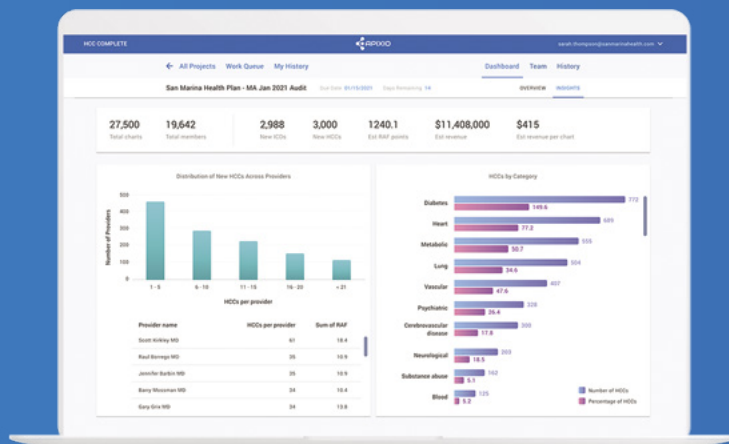

“By using Apixio, we’re improving our auditing bandwidth and enhancing the ability of our coders to focus on other chart audits and projects we couldn’t do before.”

JoAnn Hayden, Supervisor of Quality Improvement Programs
SCRIPPS HEALTH PLAN SERVICES

Benefits of looking both ways with AI

- ✓ **Improved Coding & Auditing Accuracy.** We serve up predicted evidence of supported and unsupported HCCs for review, helping reviewers accurately code member risk.
- ✓ **Protection from Audit Risk.** AI algorithms identify codes from claims and supplemental submissions that may lack sufficient evidence, putting your organization at audit risk. Potentially unsupported HCCs are routed for review in an efficient application to ensure providers, internal coders, and vendors are making defensible coding decisions.
- ✓ **More Efficient Coding and Auditing.** Coders are pointed to specific pages with supporting evidence of net-new HCCs, and auditors are routed targeted charts with potential missing evidence for existing codes, drastically reducing review times.
- ✓ **Optimized Coder Performance.** Project tracking and management tools provide insight into your team's coding and audit performance and full control over project assignments and workflows.

Proven technology. Reliable results.

Using HCC Complete for chart reviews, risk adjustment teams have seen a:

- **4-6X increase** in coding & audit productivity
- **20% increase** in coder accuracy
- **80% decrease** in coding & audit time

HCC Complete is available as an application for 1st-pass reviews and an AI-assisted service for 1st-or 2nd-pass reviews. Learn more at apixio.com

AI analytics for risk and quality

Improving healthcare outcomes requires access to the right data at the right time. Apixio is advancing value-based care with data-driven intelligence and analytics. Our AI solutions for risk, quality, and clinical insights unlock actionable information from administrative data and unstructured clinical information. The results drive better clinical decision-making and a smarter approach to healthcare.
