# APIXIO®

Deliver AI-powered prior authorization decisions in seconds

Our Apicare AuthAdvisor generates predictive prior authorization decisions based on Apixio's machine learning technology to drive efficiency and cost-savings.

# APIXIO® | Apicare AuthAdvisor

The current prior authorization process is time-consuming and wasteful

Health plans currently spend valuable time and resources manually reviewing authorizations for patient services that could be automatically approved in seconds. Current prior authorization processes can take days to weeks for final determinations. As a result, providers and patients experience delays in care and the frustration of administrative roadblocks impeding care delivery.

Make high confidence decisions with Apicare AuthAdvisor

Apixio's Apicare AuthAdivsor provides AI-powered decision support to payers, utilization management teams, and other organizations by delivering predictive prior authorization decisions within the request workflow to streamline the payer approval process and enhance provider and member satisfaction. A part of our Value-Based Care Apicare platform, AuthAdvisor supports a data-driven and trusted authorization approval process.

with **Apicare AuthAdvisor** over manual prior authorization review

How we support your prior authorization process

Apicare AuthAdvisor generates predictive decisions based on Apixio's industry-leading Apicare AI platform. By utilizing historical administrative data and decisions data, our solution can approve requests in seconds and route requests requiring more detailed clinical review to the appropriate reviewers.

Benefits of AI-powered prior authorization

With Apixio's Apicare AuthAdvisor solution, organizations can:

- Drive cost-savings by reducing the volume of unnecessary reviews with automated decision requests based on our AI-trained model.
- Fine-tune thresholds with user-enabled controls on a procedure-by-procedure basis.
- Deliver immediate results by deploying in existing workflows through APIs.
- Enhance provider and member satisfaction with timely feedback from requests.

Auto-Approve within Workflow

Escalate to Clinical Review

Apicare AuthAdvisor Responds with Predictive PA Decision

PA Administrative Data via API (Not Clinical Data)

Provider Orders Procedure

Provider Submits PA Form

Payer Receives Data

Apixio's Apicare AuthAdvisor Analyzes PA Data
