HOW OUR RISK ADJUSTMENT SOLUTIONS WORK FOR ACOs

IMPROVE PATIENT RISK CAPTURE WITH TIMELY, RELIABLE ANALYTICS

To maximize shared savings and improve patient and population health outcomes, mastering risk adjustment is a critical factor for ACO's participating in MSSP, ACO REACH, and other alternative payment models. Unfortunately, risk capture can be difficult to operationalize and scale due to the administrative burden on clinicians.

As an industry leader, Apixio's AI-powered risk adjustment solutions support Medicare ACOs by identifying risk-adjustable diagnosis conditions prospectively and retrospectively. Analyzing data across claims, medications, lab results, progress notes, and the EHR, clinicians can get recapture and suspected conditions directly at the point-of-care in the EHR workflow.

In addition, Apixio can leverage retrospective chart review to support a complete and accurate view of the disease burden of the population to support provider education and target patients for annual wellness visits and care management programs. Our solutions are available to exchange and manage healthcare data across your provider network to support risk adjustment and other value-based care activities.

LEVERAGE RELIABLE ACTIONABLE INSIGHTS TO IMPROVE PATIENT RISK CAPTURE

EFFICIENTLY CLOSE DIAGNOSIS GAPS

Quickly review and confirm diagnosis gaps within the EHR workflow.

IDENTIFY & EVALUATE SUSPECTED PATIENT DIAGNOSES

Evaluate suspected diagnoses identified by advanced AI algorithms.

DELIVER CARE WITH ACTIONABLE INSIGHTS

Inform care delivery with curated health history and condition insights.

OPTIMIZE PROGRAM PERFORMANCE AND IMPACT

Measure provider engagement and patient risk capture for continuous improvement.

OUR SOLUTIONS

CLINICAL GUIDANCE

ENSURE COMPLETE, ACCURATE RISK CAPTURE WITH AI-DRIVEN INSIGHTS

The administrative burden for clinicians to review a patient's chart can be time-consuming and difficult due to the amount of data to mine through. Apixio's AI-driven, EHR-integrated prospective risk adjustment workflow suite surfaces actionable insights at the point-of-care, enabling complete risk capture and documentation accuracy to support pre-visit planning and concurrent review.

BENEFITS:

- Leverage structured and unstructured data to develop a comprehensive patient health profile
- AI-assisted pre-visit prep workflow allows you to review charts 5x faster
- Streamline concurrent workflows and effectively scale review processes across at-risk patient populations
- Measure provider engagement and gap closures to validate and improve results

RETROSPECTIVE RISK ADJUSTMENT

BENCHMARK YOUR POPULATION'S DISEASE BURDEN

Medicare ACOs may struggle with understanding the full risk of their patient population. Apixio's AI-powered risk adjustment coding and auditing solutions help scale retrospective chart review to capture a complete, accurate picture of your population's disease burden.

BENEFITS:

- Find 20% more supported codes with Apixio's AI-powered coding solution compared to manual coding
- Screen out 80% of charts that require chart review
- Project tracking and management tools provide insight into coding and audit performance
- Leverage Apixio's insights to reopen claims, campaigns for annual wellness visits, and provider education

INTEROPERABILITY

EXCHANGE AND MANAGE HEALTHCARE DATA SIMPLY AND SECURELY

As part of a Medicare ACO, data silos can exist across your provider network with variety of EHRs. Apixio's Interoperability solutions enable healthcare organizations to securely exchange and manage health data to deliver efficient and effective care to support their value-based care initiatives.

BENEFITS:

- Enable bi-directional data exchange with major EHRs to acquire charts and deliver insights into the workflow
- Centralized patient charts to leverage for risk adjustment, quality, and more
- Search, filter, view, download and/or transfer charts directly, in real-time
- Deliver advanced insights from previously known diagnosis codes in charts

Apixio is advancing value-based care delivery with data-driven intelligence and analytics. Our AI-powered Apicare platform gives value-based care organizations across the healthcare spectrum the power to mine clinical information at scale, creating meaningful insights that will change the way healthcare is measured, care is delivered, and value is realized.
