Apixio
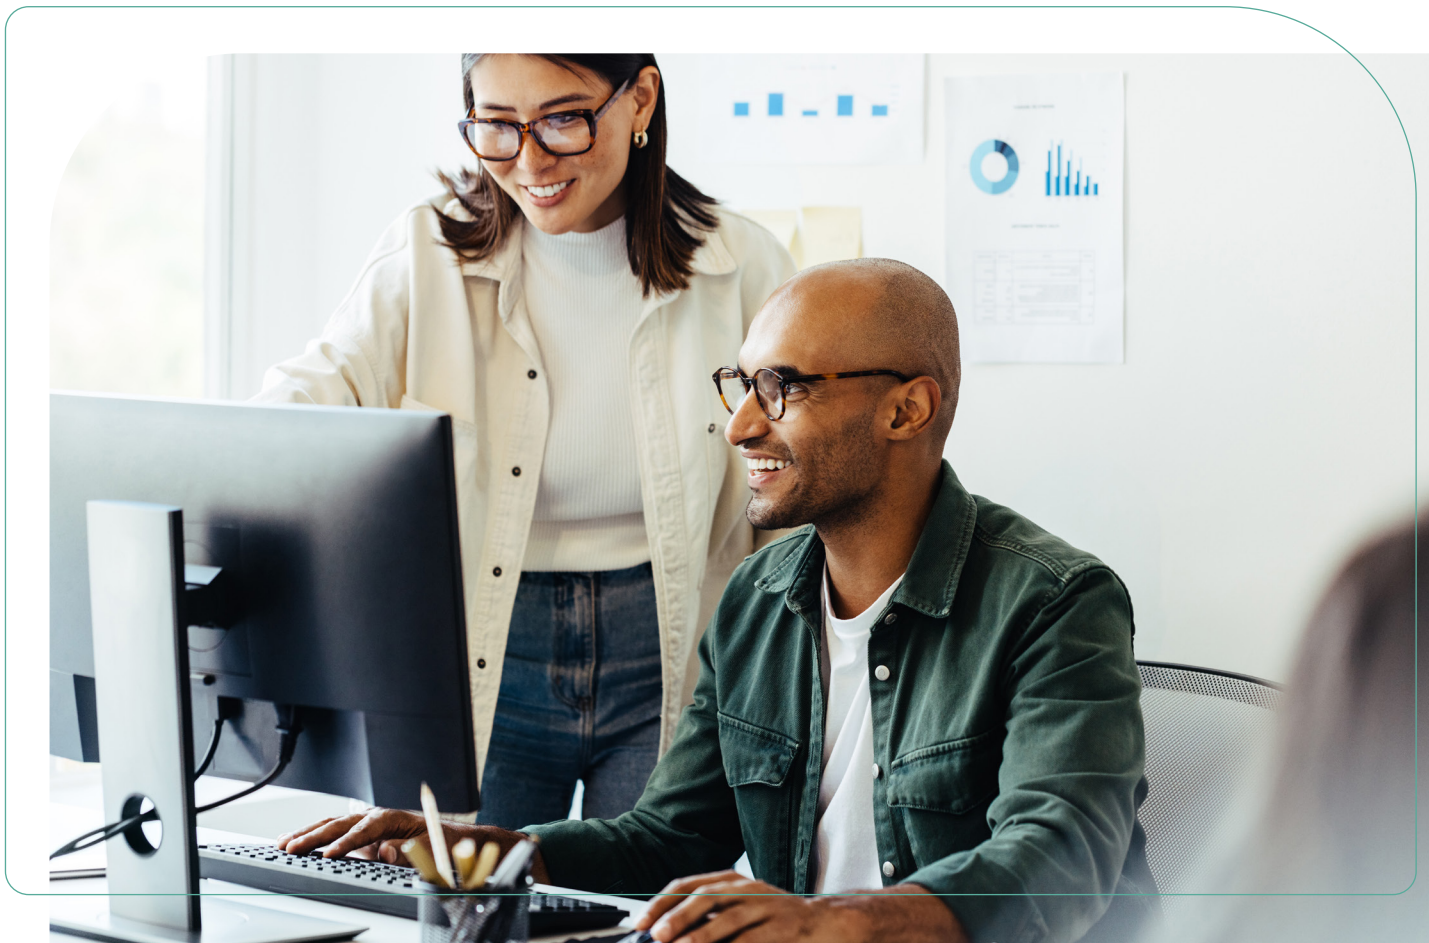

Power Programs Across Your Organization with Centralized Health Data and Insights

Maximize the value of your health data enterprise-wide with streamlined data acquisition processes, centralized chart storage, and analytics.

Harness the Power of Health Data to Drive Decisions Across the Enterprise

Get More Value Out of Your Health Data

Getting timely access to medical charts from EHRs and other data sources is an ongoing challenge for payers and providers. As much of this data is siloed to various provider networks, departments, systems, and formats, teams like risk adjustment, quality, utilization management, and payment integrity don't have processes and systems to store and access data in a centralized, organized way.

As a result, charts are typically used only once for a specific program, increasing administrative spending and waste.

Apixio Health Data Nexus™ is our health data management solution that enables payers and providers to centrally access and store clinical and administrative data with AI-driven insights. This unified repository can be seamlessly utilized across different lines of business programs, enhancing efficiency, transparency, and scalability across your organization.

Our Solutions

Health Data Nexus

- Chart Retrieval
- Chart Repository
- Analytics

Expand Data Nexus' capabilities with pre-built connectors for advanced chart management, risk adjustment, population health management, payment integrity, and more.

# Unlock Actionable Insights with Unified Health Data

Apixio Health Data Nexus provides healthcare organizations with a scalable solution for securely storing, accessing, and sharing chart data.

Our solutions ensure a smooth exchange of information between health plans, providers, and vendors. This health data platform unifies disparate data sources, powers Apixio's solutions, and centralizes insights and analytics, for use across the enterprise.

Key Benefits:

- Retrieve patient charts faster and with less provider abrasion.
- Centrally access patient charts across formats (PDF, images, HTML, CCDA, FHIR®) in a single, secure, searchable platform.
- Standardized and custom analytics with actionable insights from structured and unstructured data, to streamline different programs.
- Securely search, filter, view, download and share charts directly anytime.
- Integrate generated insights back into health data charts, enabling up-to-date and reliable data enterprise-wide.

How It Works

EHRs
SFTP
APIs

STRUCTURED
- Eligibility
- Demographics
- Claims
- MAO-004, MOR, MMR
- Prescriptions
- Lab Results

UNSTRUCTURED
- Medical Charts
- Scanned Documents
- Physician Notes
- CCDA
- Forms

NORMALIZE & DEPLOY APIXIO'S AI MODEL

Data extraction, translation, normalization, mapping, and transformation to Apixio's data model.

1. Chart Repository
2. Reporting
3. Analytics
4. Longitudinal Record

Risk Adjustment
Payment Integrity
AI-as-a-Service (AIaaS)
